

# OSB User Guide

## FURNITURE

### General

OSB - Oriented Strand Board is a structural panel for furniture

OSB is mainly known for its use in building, but if OSB contributes to the frame house structure it can also be used for the fabrication of furniture. What we mean by furniture is everything that has a connection with layout within the house, shops or offices, such as sofas, little cupboards, wardrobes or shelvings.

### Decoration

Thanks to its decorative side, OSB will be used to manufacture shelvings in places like opticians, phone shops, clothing shops or bakeries.

### Fabrication

Its mechanical properties are excellent for the frame of sofas and armchairs. OSB is the structure, which will receive the foam and material or leather.

Either used for the construction of a desk, a simple board with trestle or for shelvings, the OSB will be most appreciated for its functionality as well as its natural wood looking in a bedroom for instance.

The OSB can be manufactured, molded, assembled or sanded like solid wood.

It can be varnished, painted or covered with MDF or any decor.

## FENCING AND FIXING

Do not staple in the edges, but on the face.

## STORAGE AND HANDLING

*See respective user guide*
